- INTRODUCTION
- EXISTING SYSTEM
- PROPOSED SYSTEM
- MODULE DESCRIPTION
- HARDWARE AND SOFTWARE SPECIFICATIONS
- CONCLUSION

# INTRODUCTION

- Servix is an web application for better execution of various social security schemes for unorganised sector workers.
- We are developing a website which allows customers to book workers for their jobs.
- This helps to ensure job for many ones and reduced the effort made by the customers in search of a worker.
- Customers get workers with a feasible rate. Skilled labours for various works within a region can be viewed and book through this website.
- Customers can give feedbacks based on workers and workers can view the same through this application.

# EXISTING SYSTEM

- In Traditional System, User need to search workers available by contact them directly.
- It is difficulty to search the available skilled labours for a particular work.
- Time Consuming
- Sometimes It is difficulty to verify if workers is skilled for a particular work or not
- Only limited workers is available

# PROPOSED SYSTEM

- Easy to search all available workers from any where.
- We can verify the workers whether they skilled or not in our website.
- Users Can search various skilled workers for a particular work and book them in an easy Manner.
- Pictorial Representation of reviews also provided.
- Less time consuming
- User can register complaints about the workers.
- Large number of workers is available.

# MODULE DESCRIPTION

- 1 User
- 2 Worker/employee
- 3 Administrator(Admin)

- Any body who is desired to get any workers can register here as a user
- For first time user they have to register here by giving there basic details like name, location, etc.
- If the user is already registered he can login and search workers in his surrounding areas
- The user has also the facility to choose desired workers based on their wages
- Another facility provided is the user can also see the availability of workers based on users time.
- User can also cancel the work if he is not available at the time
- There is also online payment option
- At the end the user has the facility to give feed back and ratings

- Any person having essential qualification and experience in the relevant field can register here
- For registering the person has to go through employee registration
- The person seeking job has to fill the form in the site by providing his basic details along with Qualification and experience certificate
- After verification by the administrator the users can see his profile in the workers list and can avail his service to the registered customers

- The admin is responsible for verification of details and certificates provided by the worker
- After verification he can accept/reject worker's profile based on eligibility criteria
- Admin is also responsible to solve the issues raised by the customers
- Admin also has the responsibility to check online transaction

# HARDWARE SPECIFICATIONS

Specifications	Web App
RAM	1 GB(Recommended)
Processor	Quad core (Minimum)
Display	1280 * 720
Hard disk	32GB-1TB

# SOFTWARE SPECIFICATIONS

Specifications	Web App
OS	Windos 8+ or Linux 16+
Front end tool	HTML
Front end language	HTML,CSS,JavaScript
Back end tool	PHP
Back end language	Mysql,PHP

# CONCLUSION

- This Application provides the platform of jobs oppurtunities to any skilled/unskilled workers.
